

Agreement Among Pairs of Justices

The following tables show the percentage of decisions in which every possible pair of justices found themselves on the same side—either both in the majority or both dissenting. The first table covers all decisions; the second table narrows its focus to decisions that were not unanimous. When reading the second table, for instance, one finds that Justices Fairchild and Fritz voted together in 38% of the decisions, while the figure for Justices Rosenberry and Fowler was 62%.
